

# E2S: Horn & Beacon Coverage (In Brief)

# Brief Overview - Horn & Beacon Coverage

Guide to audible signals – reduction in volume over distance

| Distance (Feet) | Distance (Metres) | Reduction dB(A) |
|-----------------|-------------------|-----------------|
| 10              | 3.05              | 0               |
| 20              | 6.10              | 6               |
| 40              | 12.19             | 12              |
| 80              | 24.38             | 18              |
| 160             | 48.77             | 24              |
| 320             | 97.54             | 30              |
| 640             | 195.07            | 36              |
| 1280            | 390.14            | 42              |
| 2560            | 780.29            | 48              |
| 5120            | 1560.58           | 54              |
| 10240           | 3121.15           | 60              |

- Every time the distance double from a sound source subtract 6dB(A) – Inverse Square Law
- Rule of thumb: alarm sound should be at least 5dB(A) above the ambient
- Double the power = increase of 3dB(A)

# Brief Overview - Horn & Beacon Coverage

## Guide to audible signals - effective distance

| Distance (Feet) | Distance (Metres) | Reduction dB(A) | A121 (112 dBA at 10' @ 1000 Hz) | A100 (92dBA at 10' @ 1000 Hz) |
|-----------------|-------------------|-----------------|---------------------------------|-------------------------------|
| 10              | 3.05              | 0               | 112                             | 90                            |
| 20              | 6.10              | 6               | 106                             | 84                            |
| 40              | 12.19             | 12              | 100                             | 78                            |
| 80              | 24.38             | 18              | 94                              | 72                            |
| 160             | 48.77             | 24              | 88                              | 66                            |
| 320             | 97.54             | 30              | 82                              | 60                            |
| 640             | 195.07            | 36              | 76                              |                               |
| <b>1280</b>     | 390.14            | 42              | <b>70</b>                       |                               |
| 2560            | 780.29            | 48              | 64                              |                               |
| 5120            | 1560.58           | 54              |                                 |                               |
| 10240           | 3121.15           | 60              | A100: 70 db distance = 103'     |                               |

- A121 has approximately 10 times effective distance than A100 & therefore 10 x the radius of coverage
  - A121 - 643,398 square feet
  - A100 - 4166 square feet
- 70dB(A) Effective
- 60dB(A) Audible
- Rule of thumb: alarm sound should be at least 5dB(A) above the ambient

# Brief Overview - Horn & Beacon Coverage

Guide to audible signals – coverage relative to ambient and horn sound levels

- Area 100' x 170'
- To achieve 90 dB(A) alarm level
  - Fit 2 x A121 @ 112 dB(A) at 10' (1000Hz)  
or,
  - Fit 80 x A100 @ 91 dB(A) at 10' (1000Hz)
- To achieve 70dB(A) level
  - Fit 2 x A100 @ 91 dB(A) at 10' (1000Hz)

# Brief Overview - Horn & Beacon Coverage

Visual signals coverage

$$d = \sqrt{\frac{I_{eff}(av)}{0.4}}$$

- Converts Effective Candela (cd) into effective warning distance. ALERT rather than inform.

Where  $I_{eff}(av)$  = Effective Candela (measured)  
d = Distance (m)

$$d = \sqrt{\frac{I_{eff}(av)}{(6.37L_b + 18.6)10^{-7}}}$$

- Converts effective candela into viewing distance or range

Where  $I_{eff}(av)$  = Effective Candela (measured)  
d = Distance (feet)  
 $L_b$  = Foot-Lamberts background illuminance (normal day time conditions,  $L_b = 2919$  ft-L)

# Brief Overview - Horn & Beacon Coverage

## Visual signals coverage – effective distance

| Effective<br>Candela | Warning<br>Distance | Warning<br>Distance | Vewing<br>Distance | Vewing<br>Distance |
|----------------------|---------------------|---------------------|--------------------|--------------------|
| cd                   | m                   | feet                | m                  | feet               |
| 5                    | 3.54                | 11.61               | 16                 | 52                 |
| 10                   | 5.00                | 16.40               | 22                 | 73                 |
| 25                   | 7.90                | 25.92               | 35                 | 116                |
| 50                   | 11.18               | 36.68               | 50                 | 164                |
| 100                  | 15.81               | 51.87               | 71                 | 232                |
| 200                  | 22.36               | 73.36               | 100                | 328                |
| 300                  | 27.39               | 89.86               | 122                | 401                |
| 400                  | 31.62               | 103.74              | 141                | 464                |
| 500                  | 35.35               | 115.98              | 158                | 518                |
| 600                  | 38.72               | 127.03              | 173                | 568                |
| 700                  | 41.83               | 137.24              | 187                | 613                |
| 800                  | 44.72               | 146.72              | 200                | 656                |
| 900                  | 47.43               | 155.61              | 212                | 695                |
| 1000                 | 50.00               | 164.04              | 223                | 733                |
| 1100                 | 52.44               | 172.05              | 234                | 769                |

Effective distances, ALERT rather than inform, and viewing distances against measured effective candela (cd) values

Ever diminishing returns!

Ambient light levels increasingly difficult to predict over longer distances.
